Job Description – Product Manager

Location: Lahore & Dubai

Company Profile

VaporVM is a cloud services company and we help organizations improve operations and reduce costs. We provide an alternative to the break/fix or on-demand outsourcing model, where the service provider performs on-demand services and bills the customer only for the work done. We also specialize in providing advisory services in Cyber Security, Data Science, and Infra. Our company is headquartered out of the United Arab Emirates and we have a global presence spanning over 3 continents and 9 countries. VaporVM is now on the verge of launching one of the first products that we believe is going to revolutionize IT service procurement.

Job Summary

You will have the ability to influence the company's product philosophy and vision. You will also have the opportunity to deliver long-term impact to an industry that has lots of room for improvement. You will work closely with designers and developers in a fast-paced startup environment. The role requires a mix of technical depth, strong product judgment, and the ability to understand the business deeply to set the right long-term strategy for the company.

Responsibilities

- You will work closely with our world-class team of designers and developers to help our product come to life and scale.
- The product is ready to go to market. You will define and lead the strategy for an effective launch using your marketing acumen.
- You will define success metrics, analyze performance, experiment, and iterate quickly.
- You will help guide product definition for a bleeding-edge customer facing product unlike any other in the industry. Your work will get in the hands of our customers immediately.
- You will establish and measure success metrics after launch. Consistently integrate behavior data and customer feedback into essential product decisions.
- You will run user research, usability studies, data-driven experiments to inform the product direction.
- You will create something meaningful. We are building a product that has the potential to change the way enterprises consumer IT services. We have immense conviction in the future of our product and its ability to revolutionize the IT services industry.

Skills and Qualifications

- Experience in working on products related to cyber security, data sciences and managed services is a big plus.
- Experience influencing product direction and others around you. You handle chaos, ambiguity, and complexity in a detailed, organized way.
- Strong UX and design sense.
- Strong communication skills, written and verbal.
- Comfort working in fast-paced and dynamic startup environment.
- Expert product instincts and an ability to balance user and business impact.
- Shipped creative and highly successful enterprise tech products; involved in process end-to-end.
