Full Stack Web Engineer

Overview

A company is Japan leading digital company that provides one-stop seamless solution by integrating information, marketing, and financial technology. Mostly services are focused on five core technologies such as Artificial Intelligence, Blockchain, Security, XR and Bio Health. A company is creating a global platform which is used to lead designers and engineers and driven by design, data, and technology.

A Japanese company is looking for Pakistan engineers to work remotely. They mainly work in outsourcing projects and own software products for their business. For their software products and outsourcing business, we are looking for independent full-stack web developers to work remotely.

What We're Looking For

You are looking to challenge yourself by joining a small team and will be comfortable becoming the independent full stack web engineer that the rest of the team can rely upon. In your downtime, you would be eager to pick up new skills and participate in developing our product alongside the rest of the team. As a Full stack Web Engineer, you will be responsible to develop and maintain web system both frontend and backend to follow the requirements of the client.

Required Skills

- Minimum 2 years of experience as a Full stack Web Engineer in companies.
- Have experience to develop Web Service itself without no support
  at least small service
  (specification/requirement/business understanding/frontend dev/backend dev/cloud architect/database design/API design)
- Have experience to design Database by yourself to understand requirements/specification.
- Have experience in both RDS and NoSQL.
- Have experience and knowledge in PHP or Java or Python or Node.js or .NET for backend.
- Have experience and knowledge in React or Vue or Angular or other frontend framework.
- Have experience and knowledge to develop web systems under public cloud (GCP or AWS, Azure)

- Have experience and knowledge in testing.
- Have experience and knowledge in waterfall or agile process.
- Have attitude to work together with cooperation / teamwork.
- Could work with members to have good communication.
- Have big motivation/interest to study Japanese.
- Have a highly **FLEXIBILITY** attitude/personality to challenge/learn/change new technology (programming language / framework/public cloud/development process/) that you have not experienced before.
- Have a high attitude to **Output/Delivery** with quickly and regularly.

Preferred Skills (It is very good if you have)

- Good communication and language skills by **Japanese**
- Open source committer for famous technology/framework(**OSS Committer**)
- Have an experience to **Create New Crypto Currency** as like Bitcoin, Ethereum.
- Have an experience to have internship in **Top/Famous** Tech company (Google/Amazon/Meta/Apple/Microsoft/IBM/DELL/Uber/Fintech Company/ Block Chain Company / Web3 Metaverse Company)
- Have experience for **White Hat Hacker** (detect security issue voluntarily for preventing business damage.)
- Have an expert skill to use **Web3 Metaverse Technology** (WebRTC / Web Transport / Unreal Engine etc)
- Have much skill of AI (Data Analysis/Data Science/Machine Learning/Deep Learning)

Who we are

Our global business is currently focused on Pakistan, building our own network of IT human resources with advanced skills and careers. We are collaborating with Pakistan's top university in setting up a recruiting center on the campus to introduce and dispatch talents who are industry-ready and move the work forward to Japanese businesses.

We are also assisting in diverse off-shore development in Pakistan, mainly in laboratory-style. This includes providing business process outsourcing solutions. For Japanese corporations planning to enter Pakistani market, we offer support in various aspects. In the future, we will expand our networking beyond Pakistan and connect with talents who have career and achievements in diverse countries and abilities to contribute to Japanese businesses significantly.
